The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57377-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell Claim 1; SEQ ID NO 3484; 21pp + Sequence Listing; English interactions

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Cgn2_6/prodata/1/pubpna/USG/7 PUBCOMB.seq:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 402;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 133, Application US/09933797

Patent No. US2002015513A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Robert A. Sikes et al.
TITLE OF INVENTION: Isolation and Use of Fetal Urogenital
TITLE OF INVENTION: Sinus Expressed Sequences
TITLE OF INVENTION: Sinus Expressed Sequences
TITLE OF INVENTION: Sinus Expressed Sequences
TITLE OF INVENTION: 1807-999

CURRENT APPLICATION NUMBER: US/09/482,933
PRIOR APPLICATION NUMBER: US/09/482,933
PRIOR FILING DATE: 2000-01-14
PRIOR PILING DATE: 1999-05/14

PRIOR PILING DATE: 1999-05/14

NUMBER OF SEQ ID NOS: 811

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 133

LENGTH: 402
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 378.6; DB 9;

Lennon & Soares (Normalization and Subtraction: Two Approaches to Facilitate Gene Discovery Genome Research 6: 791-806, 1996). The oligomucleotide used to prime first strand synthesis contained the sequence tag AAGATATCAA between the Not I cloning site and dil8 streetch. The Rat Ostscoblast tissue was provided by Lian & Stein of the University of Massachussetts Medical

The sequence contained an oligo-dr track that was present in the
The sequence contained an oligo-dr track that was present of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the Notl site
and the oligo-dr track served to verify it as a clone from the
normalized osteoblast library cDNA Library Preparation: M.B. Soares
Lab Clone distribution: clones will be available through Research
Genetics (www.resgen.com) The following repetitive elements were
found in this cDNA sequence: 1-22, AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
